400 Rood Avenue, Room 224
Grand Junction, Colorado 81501-2563

August 13, 2013

WETLANDS DELINEATION CONSULTANTS-updated biannually

Increasingly, potential applicants for Department of the Army permits are hiring environmental consultants to do wetlands determinations and delineations for them. In addition, because of Federal budgetary and work force constraints, we are requesting that many potential applicants have wetlands delineations done by consultants. Under existing constraints, the Corps of Engineers will field verify as many wetlands delineations as possible. We recommend that wetlands delineations performed by consultants be submitted for review and verification at least one month in advance of a submittal of a Department of the Army permit application.

All wetlands delineations will be reviewed to insure compliance with the methodology contained in the Corps of Engineers Wetlands Delineation Manual dated January 1987 and that sufficient information is provided to justify the wetlands/upland boundaries as shown on the delineation map(s). To obtain a jurisdictional determination letter from the Western Colorado Regulatory Office, **all consultant-prepared wetlands delineations shall contain:**

1. A field verifiable wetlands delineation map depicting a point-to-point survey of the wetlands boundary as flagged by the consultant in the field. The consultant should review the survey for accuracy before submittal to this office. We prefer topographic maps with contour intervals of one or two feet and at a scale of 1 inch equals 100 feet. However, these specifications may vary depending upon the scope of the delineation and the nature of the project. In certain situations, a point-to-point survey of the wetlands boundary may not be required. However, the boundary must be reproducible in some manner. The consultant should contact this office for approval before submitting a delineation without a point-to-point survey. In all cases, the wetlands boundary must be marked with survey flagging or stakes in the field before this office will conduct a site inspection to verify the delineation. The flags or stakes must be sequentially numbered and those numbers shall appear on the survey for each point;
2. The type(s) of wetlands present, such as riparian willow, wet meadow, marsh, etc., should be shown on the delineation map. The respective sizes in acres of each type should be included either on the map or in a report;
3. The location of all sample sites should be shown on the delineation map(s);
4. Wetlands delineation data forms, or similar data sheets, for each sample site, cross-referenced to the sites should be shown on the delineation map(s). The data for each sample site shall clearly list the indicators for the soils, vegetation and hydrology, and shall include the basis for determining whether the sample site is wetlands or upland. The number of sample sites will vary depending upon the size and shape of the wetlands, the degree of difficulty in differentiating wetlands and upland, width of transition zones, etc.;
5. Site location map, preferably 7.5-min.USGS quadrangle, shall be included and any other pertinent maps of the site; and
6. A brief written report shall be included with the submittal. This report should list the property owner(s) and/or the developer(s) requesting the delineation. The report shall also describe the nature of the proposed development, and when a permit application will be submitted for the project. Your report should explain the basis for the wetlands boundary location and any problems or questionable areas. The dates of the actual fieldwork should also be included in this narrative.
7. For potential isolated waters, including isolated wetlands, note in your delineation report any observed and/or documented examples that substantiate the rationale for jurisdictional or non-jurisdictional waters of the United States.

The Corps of Engineers will acknowledge wetlands delineations that are complete and accurate. In the event that work force constraints preclude timely field verifications, this office may issue a qualified approval. However, prior to definitive regulatory approvals, such as a letter of no Federal jurisdiction, nationwide general permit verification, individual permit issuance, etc., wetlands maps will usually be field verified by the Corps of Engineers.

We have attached a field data sheet for photocopying and field use. This form should be used for wetlands delineations subject to Corps of Engineers verification. If you and/or your consultants have questions regarding wetlands delineation procedures, please contact the U. S. Army, Corps of Engineers, Sacramento District in Grand Junction, Colorado at telephone number (970) 243-1199.

The following list of consultants is arranged in alphabetical order and is provided purely as a convenience for members of the public. The Government makes no warranties, representations, or guarantees about the qualifications, experience, or competence of any individual or company whose name appears on the list. The Government assumes no liability for any damage suffered by anyone doing business with a person or company named on this list. The following are categories of a consultant's claimed unique expertise and/or competencies:

Wetland delineation¹, stream restoration and channel stabilization², wetland mitigation³, fish habitat improvement⁴, professional licensed engineering⁵, Section 404 & Section 10 violation resolution/compliance⁶ and EA/EIS preparation⁷.
